

EQUUSTOCK, LLC

From its inception, Equustock, LLC has been dedicated to the protection of our environment and promoting good environmental practice.

Reduction of bedding consumption is economically beneficial to the direct consumer. This reduction in consumption also brings reduction in disposal which is beneficial for everyone. Waste Minimization reduces landfill waste in urban animal environments. In agricultural areas, reduction of compost spreading and the creation of a more environmentally friendly compost enhances growing fields and crop production. Further recycling of the compost is viable because the quality of the compost from a Guardian Horse Bedding facility is commercially gradable.

Further, all materials used to create our superior bedding and fuel pellet products are considered by-products. The full circle recycling benefits of our high quality bedding pellet and premium grade fuel pellet are so satisfying from a corporate and personal aspect.

We hope you will join us and do everything you can to protect the environment responsibly.

Two Exceptional Brand Name Products

Big Heat
Premium Wood
Fuel Pellets
